Where this fits

A **class** is the starting point for everything else. It holds your students (as anonymous groups, no personal accounts) and the activities you build for them. Do this once per class; it takes about three minutes. Afterwards, follow *T2 — Create your first activity*.

1 What a class is

In AIPLA a **class** is a container you own. It has:

- one or more **group codes** — the short codes students type to join. Students do not create accounts and do not log in; the group code is all they need.
- the **activities** you assign to it (guide *T2*).
- a **tutor persona** — the voice and style of the AI tutor for this class, which you can leave as the default or change later.

Everything below is done in your browser. You do not need a developer.

💡 The co-pilot can do this for you

The class list has an AI **co-pilot** panel. You can create a class and mint group codes by asking it in plain language, instead of using the forms below — see *T4 — Author with the AI co-pilot*.

2 Step 1 — Create the class

From your teacher area, open **Classes** and select **New class**. Give the class a **name** — for example, “*Physik 2.g, autumn 2026*” — and, optionally, a short description. Select **Create**.

The screenshot shows the AIPLA Teacher interface. The top header includes the AIPLA Teacher logo and a 'Sign out' button. The left sidebar contains navigation links: Collapse, Classes (selected), Activities, Insights, and Settings. The main content area is titled 'My classes' and includes a '+ New class' button. Below this is a form for creating a new class with fields for 'Class name' (with an example 'e.g. Physik 9A vår 2026') and 'Description (optional)'. The form has 'Cancel' and 'Create' buttons. Below the form is a table of existing classes with columns: CLASS, GROUPS, ACTIVITIES, TUTOR PERSONA, and ACTIONS. The table lists a 'Demo class' with 1 group, two activities, and a tutor named Sofie. Below the table is a link to 'Show insights & spend'. At the bottom, there is a 'Recent activity' section showing a problem-set hint.

CLASS	GROUPS	ACTIVITIES	TUTOR PERSONA	ACTIONS
Demo class	1	Velkommen — sådan virker AIPLA Kastebevægelse (Boldkast) act-e6b1ee5065539b25	Sofie · default	Manage Delete

Figure 1: The New class form: a name and an optional description.

Your new class now appears in the class list, alongside any others you own.

Figure 2: The class list shows each class with its group codes, activities and tutor persona.

3 Step 2 — Mint a group code

Open the class with **Manage**. A new class has no group codes yet, so select **New group**. AIPLA generates a short code and copies it to your clipboard.

The screenshot shows the AIPLA Teacher interface. On the left is a sidebar with a 'Collapse' button and a menu with 'Classes' (selected), 'Activities', 'Insights', and 'Settings'. The main area is titled 'Demo class' and shows '1 group · 3 activities assigned'. A section 'Where settings live' explains the roles of 'Persona' (teaching style and voice), 'Activity' (teaching goal and materials), and 'Class' (roster and group codes). Below this is a 'Live' section stating 'No groups online yet.' The 'Groups' section shows a group named 'spiral-flute-49' with the last active time 'Jun 30 · 1 turn' and buttons for 'Copy code', 'Reset session', and 'Report'. A '+ New group' button is also present. The 'Class settings' section explains that the tutor persona, voice, and student permissions are set here. The 'Tutor persona' section offers three choices: Astrid (Senior underviser, Rigorous), Frida (Gymnasielærer, Warm), and Henrik (Erfaren lektor, Rigorous). Each choice includes a description of their teaching style and a voice sample in Danish.

Figure 3: Selecting New group mints a code students use to join.

You can mint more than one group code for the same class — for example, one per table group or per lab pair — so you can tell their work apart in reports.

4 Step 3 — Share the code with students

Give students the group code. They open the student link, type the code, and they are in — no login, no personal account (see *S1 — Join and use your tutor*). Anything they do is grouped under that code, so your class reports stay organised.

Tip

Group codes are how you separate one class — or one lab group — from another in the reports. Mint a fresh code for each group you want to track separately.

5 Next steps

- Build the first activity for this class — *T2 — Create your first activity*.

- Add curriculum documents the tutor can draw on — *T3 — Add and organise curriculum materials.*
